

Chapter 3 CheckOutRegister -Lab

Create a class, called "Register". It has a main function.

In the main function, you should interact with customer for inputting 5 single item names and the prices. You should be able to calculate total cost for 5 items that the customer purchased in the store. You also should apply the 7.75% sales tax on the total amount of purchase and provide the customer a grand total. At the end, you should have a dialog with customer for the payment amount and you should print out the money amount received and the change amount for customer. Your output should formatted and look like:

Sun Light Detergent	\$2.95
Lined Notebook	\$0.89
Nike Running Shoe	\$56.97
Paper Towel	\$4.99
Aquafina Spring Water	\$7.95
Sub Total	\$73.75
Tax (7.75%)	\$5.72
Grand Total	\$79.47
Customer Pay	\$100.00
Change	\$20.53
