

AP Computer Science Mini Lab

Given the following interface:

```
public interface CellPhone {  
    void powerOnOffButton( );  
    void dial( );  
    void chargeBattery( );  
}
```

(1) Create three classes, *SamsungPhone*, *ApplePhone*, and *MotoPhone*, to implement the “CellPhone” interface.

(2) Write a test class, *CellPhoneTester*, to use the above three classes and test the implementations.
